

Abstract of the Disclosure:

A message is transmitted to a terminal in a data communications network, in particular an IP network, or from the data communications network to a telecommunications network, in particular a mobile radio network. The message format is converted, prior to its transmission, in accordance with a applicable conversion and processing rule set from a set of conversion and processing rules which are stored in a rule database. Optionally, supplementary information is added and/or the message content is reduced by predetermined parts.
